

WashMaster 500

CLOSED-LOOP DEGREASING & WASH
WATER RECYCLING SYSTEM

- f CLEAN AND DEGREASE QUICKLY
- f HIGH AND LOW PRESSURE WASHING
- f EPA COMPLIANT WASHING
- f ZERO DISCHARGE
- f RECOVER AND RECYCLE WATER
- f CUSTOM SIZES AVAILABLE
- f NO TRAINING REQUIRED
- f PLUG AND PLAY
- f FORKLIFT MOVABLE

Features GripStart™ technology: pull the trigger to start the system, let go to begin shut-down sequence

Wash water is recovered from rack and cycled through a filtration system

The WashMaster 500 is a closed-loop wash rack with 100% water reclamation designed for industrial users who need to clean/degrease large parts, assemblies and equipment within their facility or manufacturing plant. WashMaster 500 is a plug and play system, complete with a pressure washer, a containment unit for wash water recovery, and a filtration system which removes solids and oils from the reclaimed water, treats it with ozone, then puts it in a holding tank to be used again for washing. WashMaster helps keep your operation in compliance with new EPA and municipal regulations regarding proper wash water containment and discharge.

WashMaster's large wash pad accommodates parts and components that are too large for parts washer cabinets, such as heavy dies, fabricated structures, weldments and fixtures. The low profile 5' high rack with 8' wide drive-on ramp offers easy and safe access even for unsteady equipment like forklifts, man lifts, dollies and maintenance equipment. Features like the diamond-tread non-slip surface, level covered center trough, and conveniently located, heavy-duty hose hangers make the WashMaster 500 incredibly user-friendly.

WashMaster 500 addresses both the labor and environmental washing concerns in industrial and heavy metal manufacturing, forging, machining, stamping and casting by eliminating intensive hand washing and offering closed loop wash and recycling operations. WashMaster also encourages preventative maintenance of in-plant equipment by centralizing washing and cleaning, providing an area to efficiently wash equipment, parts and tools while remaining EPA compliant.
